

PTO Pump

VERSITILE | HIGH CAPACITY | STRONG

VERSATILE – flexible and mobile to any location via a multitude of ways depending on individual site requirements.

HIGH CAPACITY – once deployed the PTO pump can clear 1200 m³/hour which equates to 20 tonnes of water per minute.

STRONG – a robust construction allowing the pump to pass debris up to 70mm across without risk of damage to the equipment.

EFFECTIVE – high pressured heavy duty pumping, can pump a high capacity of water up to 2 metres lift.

The PTO pump is a minimum input maximum output piece of equipment for emergency pumping – a must have for municipalities and government agencies. The pump uses a left turning impeller, meaning there is no need for a direction reversing gearbox.

The robust construction allows the passing of debris up to 70mm. ACE can supply you with a strainer that fits to the inlet pipe in order to remove larger debris. The pump can be transported in a multitude of ways, from a 3 point link system to a complete custom built trailer with hydraulically controlled suction pipe.
